ARMOUR DRESSING INSTRUCTIONS

---

## ARMOUR DRESSING INSTRUCTIONS

Our new armour is a precise duplicate of the armour we produced in 1976, but using today's more advanced production techniques and materials. Made of acrylic capped ABS this rugged armour has been made not only to look great on a mannequin (not supplied) but also strong enough to withstand the rigours of costuming. The ABS matches the same colour hues of the original helmets as well as our own current range of Stormtrooper helmets. You can combine it with the Stunt, Hero or Battle-Spec range of helmets. Please note that white boots and blaster are not provided.

Comes ready-to-wear straight out of the box with the black body suit, gloves, hand armour and a professional "popper" integrated strap system. We've also ensured there is enough tolerance in the armour such that it can accommodate various body dimensions- with sizes typically varying from 5'6" to 6'2" with different builds. However as a modular design it can easily be adapted for people outside the core dimensions. Supplied with or without the battle-spec helmet this is a collectable you will want to wear.

**SO REPORT FOR DUTY TROOPER!!!**

## DRESSING THE ARMOUR

(Red dots on the right side, green dots on the left)

The black body suit will fit a large range of sizes. The zip is two way and top to bottom. The (ABB) Abdominal front, bottom and lower back come assembled in the pack. Dress them first crossing the straps over at the front.

## ABB FRONT & BACK

Use the velcro straps to adjust the front and back to the tightest gap.

---

## **CALVES**

Open calves at the velcro back joint and clamp onto leg. Adjust velcro overlays, so calf sits as tight as possible.

## **THIGHS**

Open thighs at the velcro back joint and clamp onto leg. Adjust velcro overlays so thigh sits as tight as possible. Use snap fastener to suspend thigh from abb front.

### **CHEST & UPPER BACK**

The chest & upper back come assembled in the pack. Slip over the head and fasten at the sides with velcro straps.

### **ARMS**

The elastic strap attached to the shoulder strap suspends the shoulder bell and bicep moulding. The bicep (upper arm) moulding is suspended from the shoulder bell.

### **FOREARM & GLOVES**

Glove comes assembled with hand armour. Forearms are clam shell design and velcro from the back. Adjust velcro on forearm so it sits as tightly but as comfortably as possible.

### **CHEST ADJUSTMENT**

Make final adjustment of shoulder strap to ensure chest overlaps the abb front easily.

### **BELT & THERMAL DETONATOR CANISTER**

Overlay the belt at the back and fasten it as tightly as possible with the velcro. The front of the belt is also supported with velcro strip on the abb front.

The thermal detonator canister clips over the belt joint

### **HELMET**

Lower helmet sideways over the head and twist it into the correct position.

### **REPORT FOR DUTY TROOPER!**
